JOYSTICK SHIELD **ADD-ON**
 DESIGNED TO HELP YOU } UNLEASH YOUR
 INNER INVENTOR

So you've designed an awesome project and now you need a way to control it? The Joystick Shield is exactly that. Whether you're jumping your way through a custom video game, driving an RC car, or guiding a prize-claw to teddy bear snatching glory, the Joystick Shield gives you the control you need. By connecting this shield to the top of an Arduino Main Board, you get all the functionality of a thumb joystick (like the ones on many popular gaming systems) and five push buttons. Throw it in a custom enclosure or leave it in its bare PCB splendor. Whatever your project, one thing is for sure - it's game time.

- 1 x Joystick Shield PCB
- 4 x Momentary Push Button Switch
- 1 x Thumb Joystick
- 1 x Mini Push Button Switch
- 2 x 6-pin Arduino Stackable Header
- 2 x 8-pin Arduino Stackable Header

* Arduino Main Board sold separately
